**PROTECT PATIENTS’ SKIN**

47% of hospital patients are incontinent.⁸

- Provides timely alerts to help reduce patient exposure to moisture
- May minimize the threat of painful IAD and full-thickness pressure injuries

**IMPROVE PATIENT EXPERIENCE**

Incontinence can negatively impact a patient’s physical and mental health, and quality of life.

- Provide peace of mind for patients and families
- Monitor resting patients without awkward incontinence checks
- Eliminate embarrassment of self-reporting and help promote dignity

**OPTIMIZE CAREGIVER EFFECTIVENESS**

Skin can be compromised in as little as 15 minutes after exposure to moisture, despite the use of a premium underpad.⁹

- Responsiveness to incontinent events
- Prioritized patient care

---

**WHILE IT IS UNDERSTOOD THAT SOME OF THE COMPONENTS OF URINE AND STOOL CONTRIBUTE TO SKIN DAMAGE, IT HAS BEEN SUGGESTED THAT DURATION OF EXPOSURE IS THE MAJOR CAUSATIVE FACTOR ASSOCIATED WITH THE DEVELOPMENT OF IAD.⁹**

In a 36-bed med-surg unit, the time that skin was exposed to moisture was reduced from: 2+ → 19
