Wearable ECG Recorder Helps Clinicians at Vanguard Medical Group Deliver Convenient Arrhythmia Monitoring

Customer

Vanguard Medical Group

Location

Verona, NJ

Key Business Objectives

- Streamline office workflows
- Enhance patient outcomes and experiences

Facility Profile

Vanguard Medical Group is an independent primary care group practice located in Northern and Central New Jersey. Established in 2012, Vanguard Medical Group has 35 medical providers, 140 employees and 50,000 active patients. The Horizon PCMH program rated Vanguard Medical Group in the 90th percentile nationwide for achieving quality measures.[1]

Thomas McCarrick, MD, MBI Chief Medical Officer and Chief Medical Informatics Officer, describes how the Welch Allyn TAGecg® Wearable Sensor helps provide convenient, patient-friendly arrhythmia monitoring at Vanguard Medical Group.

Convenient Solution for Arrhythmia Detection

"The TAGecg Sensor has allowed us to monitor for arrhythmias without referring patients to a cardiologist or hospital, or investing in a traditional Holter setup. This has proven much more convenient for patients and the practice."

Designed for Your Patients and Your Practice

"Because the information is captured in the sensor itself and does not require a separate device, we are not limited in the number of simultaneous patients being monitored as we would be with a traditional Holter recorder."

Confidence with Fast, In-Office Reports

"The 7-day recording [period] also gives us more confidence in our results as compared to a 24-hour monitor. Getting the results in a matter of minutes and promptly providing results back to the patient has been a positive experience for both providers and patients."
